# netlanguages®

## THE WEB'S MOST EFFECTIVE LANGUAGE SCHOOL

### Our clients say:

*"Having worked with Net Languages courses both in our own training centres and with numerous corporate clients, I can honestly say that they are the most efficient, adaptable and enjoyable Net-based language courses on offer at the moment. "*

Pascal Gosteau  
CCI Valencienne

*"I would strongly recommend this course to any person or company seeking an Internet English training solution. I have seen several courses, but nothing rivals this in terms of contents and structure. I was very impressed."*

Michael Taylor Stanley  
Language Training Manager, Spain

Net Languages is a Web-based language school whose aim is to exploit the enormous potential created by the combination of computers, communications technologies and professional language tutors in order to provide an innovative, efficient and engaging way of training people to communicate effectively in a foreign language.

### About us

Net Languages was established in 1998 by a team of teachers from International House and benefits from that organisation's 50 years of experience in language teaching and language teacher training.

A good indication of the quality of our courses is the fact that our English language courses have been recognised as efficient by the Language Studies Unit of the University of Aston (U.K.).

### Our courses

We offer an increasingly wide range of language courses, including:

Our **General English** course series, which covers all levels from beginners to advanced. Each of the seven levels contains materials for around 120 to 150 hours of study.

A series of **English for Work** courses, designed for people who need to use English in their workplace. Available at two levels, lower- and upper-intermediate, each English for Work module contains materials for around 20 to 25 hours of study. Topics covered include:

- ▶ Telephoning
- ▶ Selling & Negotiating
- ▶ Making Presentations
- ▶ Meetings
- ▶ Travelling
- ▶ Banking & Finance
- ▶ Staffing & Training
- ▶ Writing

An **IELTS preparation course**, which includes an end-of-course exam simulation. We also offer an additional separate practice test for extra exam practice, or to allow students to gauge their IELTS band score before and after the preparation course.

A series of **practice tests for First Certificate of English**.

**Methodology for Teachers** courses for primary and secondary level teachers.

**English for Kids**, a series designed for children aged 8 to 11 that can be used to supplement school work.

**English for Teens**, a series designed for 11 to 14 year-olds.

**Speech Work**, our innovative English pronunciation practice tool.

A series of **Webquests** for students of English or French.

Our **General Spanish** course series, which also caters for students at all levels. Our General Spanish course series is structured in the same way as our General English courses, so each level contains materials for 120 to 150 hours of study.

### Course formats

We offer all our courses in a range of formats, designed for different market segments

#### 1. Courses for individual students

Our standard course format, designed for individual students, consists of three basic components:

##### a. The course materials

These have been designed and developed by our own team of language teaching experts and technical specialists. Each interactive activity is designed to be of real pedagogical value and to be user-friendly, fun and motivating. The materials cover all aspects of the language - grammar, vocabulary, speaking, listening, reading, writing, pronunciation - and they take advantage of the vast learning potential offered by the World Wide Web. We also include progress tests and end-of-course exams where appropriate.

##### b. Tutor support

Most of our courses also include personalised tutor support with a professional language teacher. At the beginning of the course, each student is assigned their own individual tutor whose role is to help the student develop his or her speaking and writing skills, give reliable and continuous assessment on their students' progress as well as provide more general motivation and support.

##### c. The virtual language school

In addition to the course materials themselves, students also have access to the supplementary study resources of our Web-based language school. These resources include a Study Room, where students can interact with each other via the Noticeboard and Chat Room; a virtual library consisting of links to other useful sites; and a cyber café, where students will find games, magazines and other recreational materials - all designed to help improve their level of competence.

#### 2. Courses for companies and institutions

For corporate or institutional clients we offer a range of additional services such as our **onsite installation service**, which involves installing our courses onto the client's server, thereby allowing anyone who has access to the client's private network to access the courses without having to go online.

We can also provide our own **administration software** which allows the client to determine who can access which courses and when. This software also includes a **student tracking and report service**.

Alternatively, as our courses are compatible with most internationally recognised e-learning standards, if the company already has its own e-learning management system, we can import our courses into that system.

Tutorials can also be organised for corporate and institutional clients on request and in accordance with the client's needs.

#### 3. Courses for language teaching organisations

Schools and colleges that have language teaching departments can also benefit from the many advantages that Net Languages can offer. Our courses can, for example, form part of a **blended learning** package which combines face-to-face classroom teaching with computer-based learning, either using the school's multimedia centre or with students studying at home.

Our courses can also form the basis of a **high-tech course program** using interactive whiteboards in the classroom.

Finally, educational institutions can also use Net Languages courses to offer a comprehensive **distance learning** service to students who cannot attend classes in their teaching centre.
